

# Decarbonisation Dashboard

Revolutionising Real Estate Sustainability

## WHAT DOES IT DO?

Longevity's Decarbonisation Dashboard is a cutting-edge platform designed to facilitate the decarbonisation of commercial real estate portfolios. By leveraging advanced data analytics and intuitive interfaces, our dashboard empowers users to monitor carbon emissions, track decarbonisation progress, and explore optimisation pathways with unprecedented ease and scientific precision.

## KEY FEATURES AND BENEFITS

- **Comprehensive Carbon Performance Tracking:** Seamlessly monitor carbon emissions and assess decarbonisation pathways at various levels, from individual assets to entire portfolios.
- **Interactive Interface:** Utilise interactive selections to customise views and analyse carbon performance data in real-time, eliminating the need for time-consuming manual organisation.
- **Tailored Solutions:** Design implementation plans, cost estimates, and timelines tailored to your specific decarbonisation objectives, ensuring alignment with your sustainability goals.
- **Hypothetical Scenario Exploration:** Explore hypothetical scenarios and assess their potential impact on carbon performance, enabling informed decision-making and strategic planning.
- **Actionable Prioritisation Strategies:** Identify high-impact measures and assets, prioritise decarbonisation efforts, and maximise return on investment with precision.
- **Risk Sensitivity Integration:** Integrate sensitivity to Building Performance Standards (BPS) and other risks into your decarbonisation strategy, minimising potential challenges and optimising outcomes.

# WHO CAN BENEFIT FROM USING THE DECARBONISATION DASHBOARD?

## 1. Heads of ESG:

Executives responsible for environmental, social, and governance (ESG) initiatives can leverage the dashboard to track carbon emissions, assess performance, and communicate outcomes effectively.

## 2. Asset and Fund Managers:

Professionals tasked with managing commercial real estate portfolios can utilise the dashboard to understand the impact of their properties' performance on decarbonisation goals and optimise strategies

## 3. Corporates:

Stakeholders involved in strategic decision-making regarding decarbonisation efforts can benefit from the actionable insights provided by the dashboard, enabling informed and data-driven choices.

We were challenged with coming up with a consistent methodology to decarbonise our global portfolio, at scale, in a cost-effective manner. The dashboard is an excellent tool for us to begin visualising and prioritising our next steps.
